Environment Protection Licence - 6957

Business Activity:

Receival, Storage and Processing of Seed Cotton. The site consists of Cotton Module storage, weighbridge, Administration Building, Cotton gin, Cotton Bale Storage Pads and associated cotton trash disposal area.

The facilities peak activity period is during the cotton harvest period from April through August each year.

During the peak period there is a large number of truck movements delivering cotton modules to the facility and also transporting cotton bales away from the facility.

The processing plant, "Gin", operates up to a maximum of 24 hours, 7 days a week until the season is completed.

Outside the peak season the gin is in repair and maintenance mode and the level of activity at the facility is greatly reduced.

Objectives of the Plan:

- Ensure comprehensive and timely communication about a pollution incident to staff at the facility, the EPA, NSW Health, Fire and Rescue NSW, SafeWork NSW, SES NSW, Rural Fire Service and the local council.
- Minimise and control the risk of a pollution incident at the facility through the identification of hazards and risks and the development of planned actions to minimise and manage those risks.
- Ensure that the plan is implemented effectively by responsible and trained staff and to test the plan regularly for accuracy, currency and suitability. This current version of the Pollution Incident Response Plan has been tested and revised through implementation of the Pollution Incident Response Scenario.

Responsible Person: Mark Noble

Distribution List.

Gin Manager: Mark Noble
General Manager – Processing: Wayne Towns
Farm Manager - Production: Paul Flewitt
Grower Services Manager: John Tully
WHS Coordinator: Jenny Schwager
EPA Liaison Jeff Rutter

2.1 Definition of 'pollution incident'

The definition of a pollution incident is:

pollution incident means an incident or set of circumstances during or as a consequence of which there is or is likely to be a leak, spill or other escape or deposit of a substance, as a result of which pollution has occurred, is occurring or is likely to occur. It includes an incident or set of circumstances in which a substance has been placed or disposed of on premises, but it does not include an incident or set of circumstances involving only the emission of any noise.

A pollution incident is required to be notified if there is a risk of 'material harm to the environment', which is defined in section 147 of the POEO Act as:

- (a) harm to the environment is material if:
 - (i) it involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial, or
 - (ii) it results in actual or potential loss or property damage of an amount, or amounts in aggregate, exceeding \$10,000 (or such other amount as is prescribed by the regulations), and
- (b) loss includes the reasonable costs and expenses that would be incurred in taking all reasonable and practicable measures to prevent, mitigate or make good harm to the environment.

Industry is now required to report pollution incidents *immediately* to the EPA, NSW Health, Fire and Rescue NSW, WorkCover NSW and the local council. 'Immediately' has its ordinary dictionary meaning of promptly and without delay. These strengthened provisions will ensure that pollution incidents are reported directly to the relevant response agencies so they will have direct access to the information they need to manage and deal with the incident in a faster time.

There are new associated offences, for individuals and corporations, for not preparing a plan, not keeping the plan at the premises to which it relates, not testing the plan in accordance with the Regulations and not implementing the plan in the case of an incident.

Location, Description and Likelihood of Hazards

Site	Hazard	Pre-emptive actions	Risk Rating
LPG Storage tank 66,000l.	Rupture of tank or fill hose during filling operation	Tank undergoes regular maintenance Tank filled by reputable LPG Supplier	Low
	Fire resulting from leak and external ignition source	Area surrounding tank maintain free of vegetation and ignition sources. Fire Hoses and fire extinguishers provided and maintained at tank	Low
Trash Yard	Fire. Burning trash from gin fire transported and dumped in trash yard setting alight stored trash	Trash is stored in long windrows which limits the quantity of trash that would burn. The trash yard is isolated from the main work area and module storage yards. A trash yard fire would generate a reasonable amount of smoke but would not put people in danger	Low
	Contaminated runoff from yard after rain	All runoff is captured in a closed drainage system which runs to a lift pump where it is pumped into earthen wall dam.	Low
Module Yard	Fire. Stored cotton modules could be set on fire through a number of avenues <ul style="list-style-type: none"> • A “hot” module delivered to the yard which ignites • External ignition source 	The Company has a comprehensive firefighting manual, procedures and extensive investment in firefighting equipment. Any fire outbreak would be quickly contained and extinguished. The module yard is separated from the main work areas and a fire would generate a reasonable amount of smoke but would not put people in danger.	Low
	Contaminated runoff from yard after rain	All runoff is captured in a closed drainage system which runs to a lift pump where it is pumped into earthen wall dam.	Low

APF Pollution Incident Response Plan

Site	Hazard	Pre-emptive actions	Risk Rating
Bale Pad	Fire. Stored cotton bales ignited by fire bales from gin. A fire would generate considerable heat and smoke.	Comprehensive firefighting manual and procedures, extensive investment in firefighting equipment	Low
Diesel Fuel Storage Tank Capacity 9,000l	Spill. Tank overfilled, hit by passing machinery	Above ground storage, protected by steel bund. Not located near waterway, equipment available to contain leaking diesel	Low
Cyclone System	Cyclone malfunction causing gin dust emissions to atmosphere	Gin dust emissions are non-toxic. Cyclones are located externally to work area and pose minimal health risk	Low
Transformer Yard	Fire. Release of inert oil, up to 1000l, from transformers, toxic fumes and smoke released to atmosphere	Transformer yard surrounded by concrete bund, Transformers owned and maintained by Essential Energy, undergo annual inspection and maintenance program Transformer yards located in low traffic areas and away from main work areas. Exposure to fumes and smoke could cause serious health problems.	Low High Health risk
Agricultural Chemical Storage Shed – Fertiliser, Insecticide, Herbicide	Fire Spill	Comprehensive firefighting manual and procedures, extensive investment in firefighting equipment Shed is located away from traffic areas Minimal quantities of product stored Minimal quantities of product stored Products segregated Storage contained by internal concrete bund Storage locked when not in use. Spill containment kit	Low Low

Pollution Incident Response Plan

Phase 1 Potential Pollution Incident Reported: Incident Assessment

The Pollution Incident Response Plan may be triggered by the report of a potential pollution incident to the Gin Manager / Shift Supervisor.

- The Gin Manager / Shift Supervisor will begin preliminary assessment of the incident to determine the severity of the incident i.e. “if there is risk of material harm to the environment”.
- If it is likely that the environment will be harmed, then it is a notifiable incident. Refer to definition of pollution incident and material harm.
- If it is a notifiable incident the Gin Manager / Shift Supervisor will contact the General Manager - Processing of the incident.
- The General Manager – Processing or their representative will immediately notify the EPA and begin actions to activate the Crisis Management Plan.

Phase 2 Response: Plan initiation

The Gin Manager / Shift Supervisor will assemble an incident response crew

- The General Manager – Processing or their representative will assemble a crisis management team and commence the crisis response plan
- The Gin Manager / Shift Supervisor will
 - make resources available to the response crew
 - Alert all people on site, employees, contractors, visitors, to the emergency and commence emergency response procedures.
 - commence record keeping – Incident Report Form
- The Incident response crew will
 - Develop a plan to respond to the emergency
 - Assemble required resources
 - Respond to the emergency and control the pollution incident
 - Communicate and cooperate with any / all state emergency authorities: Rural Fire Service (RFS), Police, State Emergency Service (SES), SafeWork NSW and EPA.
- The State Authorities will take control of incident response activities as and when necessary.
- The WH&S Coordinator will
 - Assist with implementation of emergency procedures
 - Take over from the Gin Manager / Shift Supervisor responsibility for gathering environmental information and records and commence incident investigation.

Department: WHS - Work Health & Safety	Next review: 27/07/2024	Page 8 of 13

APF Pollution Incident Response Plan

Phase 3 Response Completion - The pollution incident has been controlled

- The General Manager / Gin Manager will resume control of the site after hand over from State Authorities.
- The response crew will commence mopping up activities:
 - Ensure all waste material from the incident does not escape from control and is disposed of legally, safely and properly
 - Equipment and machinery washed down and return to normal service
- The response crew leader will report to Gin manager / Shift Supervisor when incident site is ready to be returned to normal activity.
- The Gin Manager / Shift Supervisor will inspect workplace to ensure it is safe and operational.
- The WH&S Coordinator will complete incident investigation report
- All Managers and Employees involved in the incident response activities will attend an incident debrief meeting from which a written report will be prepared.

Staff Training

All staff will attend a seasonal induction and training sessions at the beginning of each Ginning Season. The induction program will include an information and training session on

- Firefighting procedures,
- Module, Trash Yard and Bale Pad surveillance
- Operate Fire Fighting Equipment
- Weekly Fire Drills
- Emergency response procedures.

Management staff will attend an annual crisis management simulation exercise.

Pollution Incident Response Scenario's

Date	Pollution Response Scenario
18/06/2021	Front End Loader on fire in module yard
22/08/2022	Fire in trash yard
23/05/2023	Fire in trash yard with strong winds blowing towards module yard
